

DOES YOUR CARE PROVIDER PROTECT YOUR INFORMATION?

Do you want to prevent any cyberthreats and keep your data safe?

Make sure that your care provider meets the digital security requirements with the data security protection tool below.

Check that your care provider is protecting your information by asking them the following questions:

- Does your care provider have a data security policy?
- Do they take data security seriously?
- Do they have a data protection officer or information governance officer?
- What is their ODS code? Then you can go check the DSPT website and check if they are completed and published.

How safe is your information?

DSPT Research Project

CHANGE STARTS WITH YOU

ABOUT THE DATA SECURITY PROTECTION TOOLKIT (DSPT)

The DSPT is an online self-assessment tool that allows you to measure your care provider's performance against data security standards.

Make sure your care provider has completed and published the DSPT to show how they manage and treat cyber awareness in their organisation and that they take the initiative to protect your data.

Raise awareness to digitalise social care and protect your data!

Scan and share the questionnaire with your friends and family!

<https://www.lscpinfo.co.uk/services/DSPT/research-project>

How it helps you?

Keep you and your family member's data, that care organisations use, safe and understand your data security rights.

**DIGITAL SECURITY IS THE
FUTURE OF SOCIAL CARE**
